Child Care Management System

Addendum to
Service Provider Interface
Technical Specifications v1.60

Table of Contents

1 Overview

The Child Care Management Solution is a national child care computer system for the administration and payment of Child Care Benefit fee relief on behalf of parents to approved child care services. It will also provide for the collection of information about the supply and usage of child care across Australia.

The CCMS will allow all CCB approved child care services to provide information directly to Department of Social Services (DSS) via the internet to facilitate the calculation and payment of CCB fee reduction on behalf of children in their service.

Services will use software available from third party Software Providers to record child and attendance information. This information will be transferred through the Service Provider Interface to DSS.

This document is an addendum to Service Provider Interface Technical Specification document, and contains the actual values of the Allowable Values referred to within that document.
